

I feel that the code requirements and re-testing for amateur radio licenses set forth in RM-10869 are good. They meet what our country requires in the conditions that we face in the world at the present time. Less tension and threats in the world should change, the F.C.C could revisit this. As for now we as amateur radio operators maybe called upon and knowlege of morse code is necessary in the publics intrest. Thank you for your consideration.
